Amendment to the Claims

Claim 1 (cancelled).

Claim 2 (withdrawn). The wire lath of claim 1 comprising a barrier layer disposed between the first and second planes.

B¹
Claim 3 (withdrawn). The wire lath of claim 2 wherein an angle θ between the portions of the transverse wires extending between one of the second longitudinal wires on one of the bent sections and the immediately adjacent first longitudinal wire attached to the shoulder portion corresponding to the bent section and a normal to the first plane is 30 degrees or less.

Claim 4 (withdrawn). The wire lath of claim 2 wherein the barrier layer is perforated by apertures and the bent sections pass through the apertures.

Claim 5 (withdrawn). The wire lath of claim 4 wherein the apertures are elongated and extend in a transverse direction.

Claim 6 (withdrawn). The wire lath of claim 1 wherein at least some of the first longitudinal wires are non-round in cross section.

Claim 7 (withdrawn). The wire lath of claim 6 wherein at least some of the first longitudinal wires are flattened and are oriented to lie generally in the first plane.

cont.
B1
Claim 8 (withdrawn). A welded wire lath comprising: a) a plurality of generally parallel transverse wires lying primarily in a first plane and each departing from the first plane in a plurality of spaced-apart bent sections, each bent section defined between first and second shoulder regions; b) a plurality of generally parallel first longitudinal wires lying generally in the first plane and intersecting with and attached to the transverse wires, the first longitudinal wires including, for each of the plurality of bent sections, a pair of longitudinal wires, one of the pair of longitudinal wires attached to each of the transverse wires in a first one of the shoulder regions corresponding to the bent section and another one of the pair of longitudinal wires attached to each of the transverse wires in a second one of the shoulder regions corresponding to the bent section; and, c) a plurality of generally parallel second longitudinal wires lying generally in a second plane parallel to and spaced apart from the first plane, the second longitudinal wires attached to the bent sections of the transverse wires.

Claim 9 (withdrawn). The wire lath of claim 8 wherein the bent sections are generally V-shaped.

Claim 10 (withdrawn). The wire lath of claim 9 wherein the second longitudinal wires are attached to the bent sections at points of the V-shaped bent sections.

Claim 11 (withdrawn). The wire lath of claim 9 wherein the bent sections have a height h and the pair of first longitudinal wires are spaced apart by a distance w with $h \geq w$.

Claim 12 (withdrawn). The wire lath of claim 8 wherein the bent sections are generally U-shaped.

Claim 13 (withdrawn). The wire lath of claim 8 wherein the bent sections have a height h and the pair of first longitudinal wires are spaced apart by a distance w with $h \geq w$.

Claim 14 (withdrawn). The wire lath of claim 13 wherein angles e between the portions of the transverse wires extending between one of the second longitudinal wires on one of the bent sections and each of the pair of first longitudinal wires attached to the shoulder regions corresponding to the bent section and a normal to the first plane are each 30 degrees or less.

Claim 15 (withdrawn). The wire lath of claim 8 wherein at least some of the first longitudinal wires are non-round in cross section.

Claim 16 (withdrawn). The wire lath of claim 15 wherein at least some of the first longitudinal wires are flattened and are oriented to lie generally in the first plane.

Claim 17 (withdrawn). The wire lath of claim 8 comprising a barrier layer disposed

between the first and second planes.

Claim 18 (withdrawn). The wire lath of claim 17 wherein the bent sections are generally V-shaped.

Claim 19 (withdrawn). The wire lath of claim 18 wherein the second longitudinal wires are attached to the bent sections at points of the V-shaped bent sections.

Claim 20 (withdrawn). The wire lath of claim 19 wherein the bent sections have a height h and the pair of first longitudinal wires are spaced apart by a distance w with $h \geq w$.

Claim 21 (withdrawn). The wire lath of claim 17 wherein the bent sections are generally U-shaped.

Claim 22 (withdrawn). The wire lath of claim 17 wherein the bent sections have a height h and the pair of first longitudinal wires are spaced apart by a distance w with $h \geq w$.

Claim 23 (withdrawn). The wire lath of claim 8 wherein angles θ between the portions of the transverse wires extending between one of the second longitudinal wires on one of the bent sections and each of the pair of first longitudinal wires attached to the shoulder regions corresponding to the bent section and a normal to the first plane are each 30 degrees or less.

Claim 24 (withdrawn). The wire lath of claim 17 wherein the barrier layer is perforated by apertures and the bent sections pass through the apertures.

Claim 25 (withdrawn). The wire lath of claim 24 wherein the apertures are elongated and extend in a transverse direction.

ant.
B.
Claim 26 (withdrawn). The wire lath of claim 17 wherein the barrier layer comprises an absorbent paper.

Claim 27 (withdrawn). The wire lath of claim 17 wherein the barrier layer comprises a series of perforations which do not coincide with intersections of the longitudinal wires and transverse wires.

Claim 28 (withdrawn). The wire lath of claim 27 wherein the perforations are round in shape.

Claim 29 (withdrawn). The wire lath of claim 27 wherein the perforations are elongated.

Claim 30 (withdrawn). The wire lath of claim 27 wherein the perforations comprise slits.

Claim 31 (withdrawn). The wire lath of claim 17 comprising a backing layer adhesively affixed to the barrier layer, wherein the second longitudinal wires extend between the backing layer and the barrier layer.

Claim 32 (withdrawn). The wire lath of claim 8 wherein at least some of the first longitudinal wires are non-round in cross section.

Claim 33 (withdrawn). The wire lath of claim 32 wherein at least some of the first longitudinal wires are flattened and are oriented to lie generally in the first plane.

Claim 34 (withdrawn). The wire lath of claim 33 wherein at least some of the first longitudinal wires are flattened and curved about a longitudinal axis wherein faces of the at least some first longitudinal wires which face away from the second plane are concave.

Claim 35 (Cancelled).

Claim 36 (withdrawn). The wire lath of claim 8 wherein the bent sections are spaced apart along each of the transverse wires at intervals of approximately 3 inches.

Claim 37 (withdrawn). A building structure comprising: a) a plurality of generally parallel framing members; b) a wire lath attached to the framing members, the wire lath comprising: i) a plurality of generally parallel transverse wires lying primarily in a first plane and each departing from the first plane in a plurality of spaced-apart bent sections, each bent section defined between first and second shoulder regions; ii) a plurality of generally parallel first longitudinal wires lying generally in the first plane and intersecting with and attached to the transverse wires, the first longitudinal wires including, for each

cont.
B1

of the plurality of bent sections, a pair of longitudinal wires, one of the pair of longitudinal wires attached to each of the transverse wires in a first one of the shoulder regions corresponding to the bent section and another one of the pair of longitudinal wires attached to each of the transverse wires in a second one of the shoulder regions corresponding to the bent section; and, iii) a plurality of generally parallel second longitudinal wires lying generally in a second plane parallel to and spaced apart from the first plane, the second longitudinal wires attached to the bent sections of the transverse wires; the wire lath oriented with the second longitudinal wires facing the framing members, each of the second longitudinal wires crossing a plurality of the framing members, and the first longitudinal wires spaced apart from faces of the framing members.

Claim 38 (withdrawn). The building structure of claim 37 wherein the framing members and wire lath are on an underside of a part of a building.

Claim 39 (withdrawn). The building structure of claim 38 comprising a barrier layer disposed between the first and second longitudinal wires.

Claim 40 (withdrawn). The building structure of claim 39 comprising a layer of solidified stucco encasing the first longitudinal wires and at least substantially filling a space between the barrier layer and the first longitudinal wires.

Claim 41 (withdrawn). The building structure of claim 40 wherein the barrier layer

comprises perforations and the solidified stucco extends through the perforations.

ant
B
Claim 42 (withdrawn). The building structure of claim 37 wherein the first longitudinal wires are flattened and are oriented with a wide dimension substantially parallel to faces of the framing members.

Claim 43 (withdrawn). The building structure of claim 37 wherein the framing members are spaced apart by distances in excess of 12 inches and the wire lath is substantially unsupported in its portions between the framing members.

Claim 44 (new) A welded wire lath comprising:

- ant.
B1
- a) a plurality of generally parallel transverse wires lying primarily in a first plane and each departing from the first plane in a plurality of spaced-apart bent sections, each bent section defined between first and second shoulder regions;
 - b) a plurality of generally parallel first longitudinal wires lying generally in the first plane and intersecting with and attached to the transverse wires, the first longitudinal wires including, for each of the plurality of bent sections, a pair of longitudinal wires, one of the pair of longitudinal wires attached to each of the transverse wires in a first one of the shoulder regions corresponding to the bent section and another one of the pair of longitudinal wires attached to each of the transverse wires in a second one of the shoulder regions corresponding to the bent section;
 - c) a plurality of generally parallel second longitudinal wires lying generally in a second plane parallel to and spaced apart from the first plane, the second longitudinal wires attached to the bent sections of the transverse wires;
 - d) a barrier layer disposed between the first and second planes; and
 - e) a plurality of spaced apart furring spacers on the transverse wires.

ant. B.
Claim 45 (new). The wire lath of Claim 44 wherein at least some of the first longitudinal wires are non-round in cross-section.

Claim 46 (new). The wire lath of Claim 45 wherein at least some of the first longitudinal wires are flattened and are oriented to lay generally in the first plane.
